

Fort Pierce Utilities

Fort Pierce Utilities is a municipal utility whose mission is “to provide our customers with economical and friendly service in a continuous effort to enhance the quality of life in our community.”

Fort Pierce is one of more than 2,000 communities in the United States served by a community-owned electric utility, and one of very few who also provide water, wastewater, natural gas, and Internet services. Public utility systems are owned by the people they serve. All benefits from our locally controlled utility remain right here in the community.

The Fort Pierce Utilities’ Underground Utilities program is just one of the many services that we provide as a convenience for our customers.

Underground Utilities

Considering putting your utilities underground? We can help..... at a discount!

Existing Buildings:

As of March 2006, Fort Pierce Utilities (FPUA) will offer a 25% discount as an incentive to existing customers who choose to put their utilities underground.

As a result of the last three hurricanes, many customers have inquired about getting their electrical service placed underground. Any existing residential customer may choose to have their utilities placed underground, but must pay for the installation. Now, however, FPUA will share 25% of the cost of installation. We will design and install the underground utilities for you at a 25% discount of the normal cost.

What policies apply to new construction?

The City of Fort Pierce has mandated that all new construction shall be designed and constructed to be permanently served by underground electric utility facilities.

Electric utility line extensions to a new electric utility service, or to multiple new utility electric services in a planned development, are also required to be placed underground. Conduit systems for such facilities shall be installed by FPUA approved forces at the customer's expense. Where extraordinary conditions of the terrain or existing structures render this requirement impractical, FPUA may use overhead construction methods in whole or in part. Temporary Service shall be exempt from any underground electric utility facility requirements wherever an overhead point of delivery is reasonably available.

DEFINITION: Underground: Below the surface of the earth. With respect to electric utility facilities, shall also include Pad-mounted equipment and other enclosures set upon the surface of the earth in support of buried electric utility facilities.
